---

## Summary

Freelance full-stack developer building custom solutions for mission and impact-driven companies and organizations. Remote worker since 2016. Available for part-time work (up to 20hrs/week) for the right company.

## Professional Experience

Starlight Global, LLC, *Owner/Software Developer* Oct 2016 - present

- Design and build client applications mostly using vanilla JavaScript (ES6), React, Gatsby, Vue, and when I absolutely cannot avoid it, WordPress. Picking up new tech is my superpower
- Modernize legacy sites to be responsive and use current standards for accessibility.
- Successfully handle project scoping and management of timelines.
- Handle projects from discovery to architecture planning and from design to build.
- Created a robust prototype social network using React, Redux, and MySQL, and integrated OMDb API.

Graphic Language, *Front End Developer* Nov 2017 - July 2020

- Senior front-end developer on an entirely remote agency team.
- Build interactive home builder sites using Laravel, Blade templates, Vue.js, and SASS.
- Advocate for and center users by leading a company push towards building fully accessible web apps.
- Design/develop APIs and controllers to consume data from PHP backend and a custom CMS built in-house.
- Catalyst for establishing and documenting an agreed-upon, uniform development workflow.
- Established a central document repository and created onboarding, workflow, and process documentation.
- Led initiative to build reusable components & maintain starter repos, which have cut development in half.
- Collaborate often with PMs and design teams to plan front-end workflow and quickly resolve client issues.
- Evaluate requests with an eye toward performance. Discuss tradeoffs and solutions when the request and goals appear in conflict.

Freecycle Network, *Web Application Developer (Contract)* Aug 2017 - Nov 2017

- Utilize an iterative, agile process to build multiple new applications
- Craft reusable components using jQuery, SCSS, Foundation, Node-Swig for templating and Vue.js
- Leverage Google Maps API and browser location to smoothly direct users to their local groups
- Create robust configurations and routes for new views using Hapi
- Maintain a complex Webpack configuration to easily serve common package and local assets

Alliance for a Healthier Generation, *Front End Developer (Contract)* Apr 2017 - Jul 2017

- Led development for two major campaigns, leveraging digital assets and integrating social media
- Extended and enhanced features while squashing bugs in a massive custom jQuery CMS codebase
- Collaborated with marketing and design teams to realize design vision while optimizing for performance
- Worked with non-technical stakeholders to align technical capabilities with design and campaign goals
- Successfully communicated across departments in an entirely remote organization

Banner Health, *Business Support Coordinator* Nov 2013 - Nov 2016

- Created user systems for managing workflow using Access, SharePoint, and HTML/CSS/JavaScript.
- Planned, built, and maintained reporting databases for senior leadership, and project management systems.
- Designed new systems for the department and worked with engineering staff to implement.

## Education

**Hack Reactor**, *Advanced Software Engineering Immersive* 2017  
**Arizona State University**, *Applied Business Data Analytics Coursework* 2016  
**Arizona State University**, *B.A., Cum Laude, English (Creative Writing)* 2012
